

Comfort Cove® Radiant Heaters

What is radiant heat?

Electric radiant heaters create radiant heat, which is more energy-efficient than other heating systems. Much like heat from the sun, the energy emitted from the Comfort Cove® radiant electric heater warms people, objects, and the floor in the room directly, which helps to significantly save on energy costs.

1. Rugged solid metal end cap
2. Ample sized junction box on either end
3. 1/2" electrical knock outs
4. Ventilated junction box
5. High temperature 125°C 12-gauge cross-link wiring
6. Long lasting commercial grade heating element with a 10-year warranty
7. Durable continuous reflector made of heavy duty 18-gauge G-90 galvanized steel
8. Convective heat outlets
9. Safe, low temperature, heavy-gauge aluminum heating panel
10. Exclusive Radiant Systems Inc. high emissivity radiant heat emitting coating
